The goal of these instructions is to familiarize the user with the basics of Excel 2010. We use a gradebook as an example to help the user visualize how different functions can be used. This tutorial will cover data entry, formatting, formulas and functions, and graphs.

Microsoft Excel 2010 Basic Instructions for Beginners : 23 ...

A custom function must start with a Function statement and end with an End Function statement. In addition to the function name, the Function statement usually specifies one or more arguments. You can, however, create a function with no arguments. Excel includes several built-in functions—RAND and NOW, for example—that don't use arguments.

Use the Custom AutoFilter dialog box in Excel 2010 to locate records that either match all criteria or meet one or the other criteria. You can use this method when you want to filter data based on a range of values (for example, you can filter for values that are greater than or equal to 1,000 in a specified column).

How to Create Custom AutoFilters for Numbers in Excel 2010 ...

In Excel 2010, you can use the AutoFill feature to create a custom list with names, locations, or other items and then use the AutoFill handle to fill these list items in order in a workbook. For example, say your company has offices in several locations and you get tired of typing out the sequence in each new worksheet that requires them.
