A flat-twin engine is a two-cylinder internal combustion engine with the cylinders on opposite sides of the crankshaft. The most common type of flat-twin engine is the boxer-twin engine, where both cylinders move inwards and outwards at the same time.. The flat-twin design was patented by Karl Benz in 1896 and the first production flat-twin engine was used in the Lanchester 8 hp Phaeton car ...

Flat-twin engine - Wikipedia

On engines with multiple cylinder banks (e.g. V engines and flat engines) use of parallel twin-turbos can also simplify the exhaust system. The 1981-1994 Maserati Biturbo was the first production car to use twin-turbochargers. The Biturbo used a 90-degree SOHC V6 engine with one turbocharger per cylinder bank.
