Ionic And Covalent Bonding Worksheet Answer Key ...
In an ionic bond, one atom essentially donates an electron to stabilize the other atom. In other words, the electron spends most of its time close to the bonded atom. Atoms that participate in an ionic bond have different electronegativity values from each other. A polar bond is formed by the attraction between oppositely-charged ions.

Ionic vs Covalent Bonds - Understand the Difference
The covalent bonding portion starts by showing students how Cl and Cl bond when they come in contact with one another to share unpaired electrons. This is followed by showing oxygen bonding to another oxygen with a double bond with two bonding pairs of electrons. The notes end with a summary of ionic, covalent and metallic bonds.
