* The problem with this method is that it will only work if the result is * smaller than 2 billion. Rewrite it so that the result is a BigInteger. * The parameters should still be integers, though. * * You can use the BigInteger methods add and multiply, but don't use the * built-in pow method, which would spoil the fun. * */

Exercise 8.4: For this problem, you will need to use an array of objects. The objects belong to the class MovingBall, which I have already written. You can find the source code for this class in the file MovingBall.java. A MovingBall represents a circle that has an associated color, radius, direction, and speed. It is restricted to moving in a rectangle in the (x,y) plane.
