Alternatively known as an Ethernet cable or LAN cable, a Cat 5 or category 5 is a network cable that consists of

four twisted pairs of copper wire terminated by an RJ-45 connector. The picture shows an example of a Cat 5 cable. Cat 5 cable is used in home and business networks, providing data transmission speeds of up to 100 MB per second. The maximum recommended length of a Cat 5 cable is 100

Category 1/2/3/4/5/6/7 – a specification for the type of copper wire (most telephone and

network wire is copper) and jacks. The number (1, 3, 5, etc) refers to the revision of the specification and in practical terms refers to the number of twists inside the wire (or the quality of connection in a jack). CAT1 is typically used for telephone wire.
