When you're finished sorting your seeds, it's time to move on to the next stage in the marijuana plant life cycle. Stage #2: Germination. Germination is the development of a plant from a seed or spore after a period of dormancy. Once you remove the seed from the marijuana plant, it will go dormant until it's exposed to moisture.

### The 7 Key Stages Of The Marijuana Plant Life Cycle

Plant life. Saharan vegetation is generally sparse, with scattered concentrations of grasses, shrubs, and trees in the highlands, in oasis depressions, and along the wadis. Various halophytes (salt-tolerant plants) are found in saline depressions. Some heat- and drought-tolerant grasses, herbs, small shrubs, and trees are found on the less well-watered plains and plateaus of the Sahara.
