Flame Tests lab. STUDY. Flashcards. Learn. Write. Spell. Test. PLAY. Match. Gravity. Created by. Leanna_999. Terms in this set (22) Purpose. Test the different metal salt solutions in a hot flame and observe the characteristic color given off by each excited atom and to identify the metal ion present in one unknown metal salt solution.

Flame Tests lab Flashcards | Quizlet

First, prepare your lab by placing the goggles over your eyes, connecting the bunsen burner to the gas, heating the bunsen burner with the lighter, and placing wooden sticks inside of the elements. Then, place one of the saturated sticks into the flame. Finally, observe the various colors that will appear based on the element that is tested.

Flame Test Lab Report by Jodeci Mitchell on Prezi Next

The heat from a laboratory burner will cause the ions of some elements to give off light. Electrons will absorb the heat energy from the flame and will “jump” to a higher energy level. When the electrons return to their original energy levels, this absorbed energy is released as light.
